DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: Claim 1 lacks antecedent basis for "the 2-axis magnetic sensor" which is not introduced until claim 2. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- a foreign country, before the invention thereof by the applicant for a patented or described in a printed publication in this or
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Application/Control Number: 10/630,187

Art Unit: 2859

3. Claims 1, 2, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Gnepf et al.

The device and method as claimed is disclosed by Gnepf et al with a 2-axis magnetic sensor, a tilt sensor, memory, a processor, and stored value of the Earth's field strength all of which are used to calculate a magnetic field component orthogonal to the 2-axis magnetic sensor.

4. Claims 1, 2, and 7 are rejected under 35 U.S.C. 102(a and e) as being anticipated by Smith.

The device and method as claimed is disclosed by Smith with a 2-axis magnetic sensor, a tilt sensor, memory, a processor, and stored value of the Earth's field strength all of which are used to calculate a magnetic field component orthogonal to the 2-axis magnetic sensor.

Allowable Subject Matter

- 5. Claim 10 is allowed.
- 6. Claims 3-6, 8, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher W. Fulton whose telephone number is (571) 272-2242. The examiner can normally be reached on M-W & F 6:00-4:30.

Art Unit: 2859

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego F.F. Gutierrez can be reached on (571) 272-2245. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
